

PEARL DRUM EDUCATION KIT ASSEMBLY MANUAL

Bell Stand Assembly (PL-910C, PK-910, PK-910C)

Open the legs of the Base to form a stable tripod and tighten the lower Wing Bolt to secure. With the Support Arms still folded, insert the Top Section into the Base to desired height and tighten the upper Wing Bolt on the Base. Open the Support Arms of the Top Section to a flat and level position and tighten the Wing Bolt (Fig.1-A). Position the stand so that the longer and wider Support Arms are on the player's left side (Fig.1).

Grasp the Bell Section with two hands, with the large end on the player's left, tone bars facing up. Place the Bell Section across the Support Arms, being careful to align the hole in the metal plate on the underside of the Bell Section with the Threaded Post Mount on the Top Section (Fig.2).

Fig.2

Install the Music Rack by unfolding and inserting the lower sections into the tab receivers on the front rail of the Bell Section (Fig.3)

Fig.3

To install the Practice Pad, fold down the Support Arms and thread the Practice Pad onto the Threaded Post Mount as shown (Fig.4).

Snare Drum Stand Assembly (PL-910C, SK-910, SK-910C)

Open the legs of the stand to form a stable tripod and tighten the lower Wing Bolt to secure. Insert the Top Section into the Base to desired height and tighten the upper Wing Bolt of the Base. Open the Basket and adjust the Butterfly Nut as needed to accommodate the snare drum. Place the snare drum into the Basket and gently tighten the Butterfly Nut to hold the drum securely (do not over tighten). To tilt the snare drum, hold the snare drum with one hand and loosen the Wing Nut on the tilter. Adjust the angle and retighten the Wing Nut when preferred angle is achieved (Fig.5).

GENERAL CARE AND MAINTENANCE

To insure the longevity and performance of your Pearl purchase, we recommend that all products be cleaned, lubricated, and inspected periodically for signs of wear. If needed, perform all necessary repairs and replace any missing parts to prevent damages from occurring.

GENERAL STORAGE

Pearl Drums are able to withstand a wide range of temperature and humidity conditions. However for best care, they should be treated like any fine musical instrument and stored in a controlled environment.

Snare Stands

If your Snare Stand has missing or worn Rubber Tips get new ones to prevent damage to your Snare Drum. Apply lubricant to the threaded parts of the stand to insure smooth and easy operation.

Snare Strainers

Periodically inspect and tighten the Bolts holding the snares. Lightly lubricate the Tension Rods and all pivot points on the Throwoff to insure smooth action.

Snare Wires

Inspect the Snare Wires for stretched, bent, or broken Wires and replace as necessary.

Snare Cord or Plastic Straps

Periodically inspect and replace immediately if frayed.

Tension Rods, Wing Bolts, Wing Nuts

Lubricate these parts with a general-purpose lubricant and wipe off excess with a dry lint-free cloth. Never use pliers to tighten Wing Bolts or Wing Nuts.

Heads

Always keep your instrument properly tuned, and avoid playing on a loosely tensioned head. Replace heads if they are dented, torn, or over-stretched.
